

# A NEW GENOME EDITING TECHNOLOGY CRISPR-CAS3

Genome editing technologies are used in various fields such as agriculture, industry, and medicine, but there are issues such as safety, including off-target mutations, and intellectual property. To overcome these issues, we have recently developed CRISPR-Cas3, a novel genome editing technology. In the seminar, I will introduce our research aimed at developing genome editing-based therapy for human diseases such as cancer and neurological diseases.

**Thu, November 10  
1pm - 3pm**

**ZOOM**
